

EchoForge simulator/evidence contract

Public priors, synthetic radar artifacts, detector views, and claim boundaries remain separated and auditable.

Public Priors fixed-wing pusher-prop public proxy aspect/RCS uncertainty bird, RC, weather, clutter hard negatives	Split Ledger 10000 groups / 50 positives 8500 train/CV groups 1500 blind-holdout groups	Radar Branches High-resolution X/Ku C-UAS: 10.0 GHz / 600 MHz Tactical S-band AESA/MHR: 3.1 GHz / 180 MHz GBAD 3D/4D cueing: 10.3 GHz / 300 MHz active IQ: 64 x 96 bins	Stress Families weather, RFI, multipath, glint EW stress: jamming/deception lane noise spot, noise sweep, noise barrage, pulse cover, ...
Detector View IQ-derived scores and jd_* diagnostics labels, split keys, group IDs denied audit-only JD fields excluded	Train/CV Lock candidate discovery uses train/CV only thresholds and calibration locked pre-holdout no holdout optimization curve	Holdout Evidence 4500 holdout records 24 positive holdout records one score pass after lock	Claim Boundary strict-open synthetic evidence not measured imagery / not field performance claim boundary: public-proxy only
